#	Topic (VBHC in Beveridgean systems)	Problem / Gap	Main research question	Methodology (minimum viable design)	Expected contribution	Complexity	Suitable Q1 journal (illustrative)	Likelihood
1	Valuing population-health data as an intangible	No accepted finance model to value population-level health data assets under EU EHDS governance	How should public providers capitalise/price secondary-use data under EHDS while meeting IAS 38 and data-quality constraints?	Conceptual model + case study (Portuguese SNS or NHS trust); IFRS mapping; sensitivity to data quality (ISO 8000); expert panel	A valuation framework (inputs/rights/risks) that boards/auditors can apply; policy-ready metrics	4	<i>Journal of Corporate Finance / Management Science (Fin)</i>	Medium (novel but technical) (Public Health)
2	Value-based procurement (VBP) & suppliers' cost of capital	Little evidence on how API/VBP payment rules affect suppliers' WACC and innovation	Do NHS Payment Scheme incentives and VBP scoring reduce SME medtech capital costs vs. price-only tenders?	Difference-in-differences using tender cohorts; supplier finance data; event study around policy inflections	Links procurement design → financing conditions → innovation entry	3	<i>Strategic Management Journal / Journal of Operations Management</i>	Medium–High (NHS England)
3	Outcomes-based finance using PROMs/PREMs	PROMs exist, but are weakly linked to capital flows at scale	Can contractible PROMs (with case-mix adjustment) backstop outcome-linked payments or SIBs at service-line level?	Instrument design + Monte-Carlo stress on case-mix models; pilot dataset (hip/knee) + GO Lab benchmarking	A template for PROM-linked financial instruments with auditable risk	4	<i>Production & Operations Management / Management Science</i>	Medium (NHS England Digital)
4	Real options for digital hospitals	Digital platforms (e.g., FDP) treated as IT projects, not staged options under regulatory uncertainty (AI Act)	How should hospital CIOs value “defer/scale/abandon” options for AI/data platforms under staged compliance?	Real-options model with policy scenario tree (AI Act timeline); multi-site NHS FDP adoption data	Prescriptive option-valuation playbook for digital health investments	3	<i>Information Systems Research / JOM</i>	Medium–High (European Parliament)
5	Working-capital stress & receivables risk	Chronic late payment to suppliers undermines VBHC adoption; evidence is fragmented	What is the causal effect of public buyer payment times on supplier failure, pricing, and innovation?	Panel data: PMP (Portugal) + EU Late Payment reforms; event study + survival models on supplier exits	Policy-relevant elasticities linking payment discipline to market structure/innovation	3	<i>Journal of Corporate Finance / Strategic Management Journal</i>	Medium (Portal da Transparência)
6	Integrated providers as internal capital markets (Portugal ULS 2024)	Unknown capital allocation effects of ULS consolidation & centralised payments	Did ULS integration + ACSS central payments improve allocation to high-value lines and reduce arrears?	Quasi-natural experiment: staggered ULS rollout; synthetic control; financial microdata	First causal evidence on internal capital markets in public healthcare	4	<i>Organization Science / Journal of Corporate Finance</i>	Medium (Diário da República)
7	Platform M&A & health-data antitrust	Limited empirical guidance on data access/interoperability remedies in health platform deals	How do data-access conditions post-merger affect third-party innovation and switching costs? (EMIS/Optum as anchor)	Mixed-methods: CMA case synthesis + difference-in-differences on connected app vendors	A design space for interoperability remedies that preserve innovation	3	<i>Strategic Management Journal / Organization Science</i>	Medium (GOV.UK)
8	Net-zero procurement & financing VBHC	ESG criteria (MEAT/PPN06/21) rising, but unclear link to financing costs and clinical value	Do Evergreen/PPN-aligned tenders lower lifecycle cost of care and suppliers' cost of capital?	Cross-sectional tender analysis; hedonic scoring vs. lifecycle cost; supplier finance data	Evidence that climate criteria can co-produce clinical & financial value	3	<i>Journal of Business Ethics / JSCM / Management Science</i>	Medium (GOV.UK)
9	Data trusts & data altruism as VBHC finance	Governance vehicles exist (DGA/EHDS), but financing models are under-specified	Can “data trusts” blend governance + capital for secondary-use datasets to fund VBHC outcomes?	Legal-institutional analysis + pilot pro-forma (fees from Findata-like permits)	A workable governance-plus-capital blueprint for public data assets	4	<i>Research Policy / MIS Quarterly</i>	Medium–High (OECD)
10	AI-as-a-Service contracting for hospitals	Rapid diffusion (e.g., ambient scribes) but unclear risk-sharing/assurance contract forms	Which contract clauses (assurance, outcome-linkage, data rights) balance safety, value and vendor risk?	Contract analytics across NHS frameworks; design science prototypes aligned to AI Act/NICE ESF/MHRA	A “model contract” kit for outcome-anchored AI procurement	3	<i>Management Science / Information Systems Research / JOM</i>	Medium–High (NHS England)
