

Contribution to Knowledge

Contribution Matrix

Type	Claimed	Actual	Assessment
Theoretical	"Redefine financial distress for public entities"	Identifies need; provides no redefinition	★☆☆☆☆
Empirical	Comprehensive Greek hospital data	Good documentation; limited generalizability	★☆☆☆☆
Methodological	Apply Z-scores to public hospitals	Confirms known model failure; no new method	★☆☆☆☆
Practical	Inform hospital oversight policy	Some actionable insights; lacks specificity	★☆☆☆☆

What Would Constitute a Strong Contribution?

Theoretical:

- Formal model of "transferred distress"
- Extension of soft budget constraint theory
- Application of real options to government decisions

Empirical:

- Panel data showing crisis predictors
- Comparative design across countries
- Validation of alternative distress measure

Contribution Grade: WEAK-ADEQUATE (2.5/5)
