

When is This Paper Useful?

✓ USE THIS PAPER WHEN:

Teaching Context:

- Illustrating limits of financial models across contexts
- Discussing soft budget constraints
- Case study in research design challenges
- Example of honest scholarly limitations

Practice Context:

- Understanding Greek healthcare specifically
- Documenting payment delay problems
- Policy discussions about transparency

Research Context:

- Motivation for better public sector metrics
- Baseline data for longitudinal studies
- Comparison point for other countries

✗ DON'T USE THIS PAPER FOR:

- **Theoretical guidance** on financial distress in public entities (theory not developed)
- **Methodological template** for empirical CF research (design inadequate)
- **Causal claims** about governance effects (no causal identification)
- **Generalizable conclusions** (single country, single year)
- **Validation** of Z-scores in public context (paper shows they don't work)
- **Q1 journal standards** (would need major revision)

📌 BOTTOM LINE

This paper is a good **starting point** for a research program, a valuable **data documentation** exercise, and an honest **problem identification** study. It is NOT a complete solution, a rigorous causal study, or a significant theoretical contribution.
