

Comparison to Project Exemplars

How This Paper Compares to Gemini/ChatGPT/Claude Proposals

Dimension	Karakolias Paper	Gemini/ChatGPT/Claude
Theoretical Depth	☆☆☆☆ Identifies problem, no solution	★★★★★ Formal frameworks (real options, SROI, data valuation)
Research Design	☆☆☆☆ Cross-sectional, descriptive	★★★★★ Quasi-experimental, causal inference
CF Theory Integration	☆☆☆☆ Limited engagement	★★★★★ Deep integration (capital budgeting, cost of capital)
Innovation	☆☆☆☆ Applies existing model	★★★★★ Creates new instruments (CVBs, receivables financing)
Data Sophistication	☆☆☆☆ Financial statements	★★★★★ Multi-source (clinical + financial + outcomes)
Actionability	☆☆☆☆ General recommendations	★★★★★ Specific mechanisms (SPVs, tranching, committees)

Key Lesson: What Makes Q1-Level Research

- Theoretical Ambition:** Don't just identify problems → Solve them with formal models
- Methodological Rigor:** Design to establish causality, not just document patterns
- Integration:** Bridge multiple literatures meaningfully
- Innovation:** Create new tools/methods/measures
- Specificity:** Concrete mechanisms, not vague recommendations

Karakolias stopped at step 1; exemplar proposals complete all 5.
